TO WHOM IT MAY CONCERN

The three 1996 Nobel Laureates in Chemistry have established the basis of a new medical life-science, upheld by physics laws challenging the entropic logic base of Western culture. The Florentine New Measurement of Humanity Project, is also researching such quantum biological life-science and have realised that the fate of civilisation depends upon balancing our science accordingly.

I consider that the important grass roots level reasoning of a Biological Charcoal Industry proposed by Dolph Cooke, incorporates social contact and endeavour that in my opinion will lead to the betterment of the Australian human condition with overlapping potential for pragmatic international inspiration.

Balancing the Entropic World View

Director

Professor Robert Pope

Artist Ambassador to the Florentine New
Measurement of Humanity Project - University of
Florence

Recipient of 2009 Telesio-Galilei Academy of
Science, London, Gold Medal Laureate
